

Characteristics of HALO Series and Precautions for Use

April 2019

Product characteristics

This genuine leather product is manufactured by hand. This may cause variations in; wrinkling of leather, distortion of rivet lines, texture of rivets, appearance and antiquing of leather.

This antiqued leather does require care and attention to maintain. It is easy to damage when scratched with sharp objects.

The camel leather used on the Dux is such that natural texture of this leather includes scratches.

To maximise the life of your chairs, please follow the recommended care instructions

The inherent property of these chairs, is that the more they are used, the more unique they become. We hope you will enjoy and appreciate the changing of chairs over time.

Care

- Protect your chair prior to use with a specialist leather protection cream. We recommend 'Leather Master Series: Protection cream and soft cleaner' to maintain your chair. It is important to use this product in accordance with the manufacturer's instructions.
- If moisture or chemical solutions (e.g. cosmetics) adhere to the product, wipe immediately with a dry cloth.
- Clean regularly using recommended product – if moisture, dirt or dust is left untreated, it may cause mould.
- When using the recommended soft cleaner do not rub, but wipe carefully.
- Should colour loss become noticeable, several coats of a carnauba wax-based product (such as Kiwi Shoe Polish Neutral) can be used to reduce the colour loss. This should then be maintained monthly.
- Do not clean with chemical cleaning wipes, washing up detergent, hand cream, milk, shoe cream, benzene, kerosene, erasers, sponges. These may change colour of the leather and chemically alter the leather surface, causing loss of flexibility and hardening of the leather

Precautions for Use

- Water/moisture on the leather will remove the protective layer, resulting in cracking, peeling and discolouration of the leather.
- Avoid exposure to sunlight - Natural genuine leather may bleach with exposure
- Avoid exposure to high temperatures - Natural genuine leather may deteriorate or warp
- Avoid direct contact with other leather products, vinyl materials, printed paper/magazines - These may cause sticky surface, loss of gloss, ink transfer
